

**Rennslisráðir til rekstrareftirlíkinga
samþykktar á 24. til 28. fundi REGN**

Kristinn Einarsson

Greinargerð KE-98-01

Rennslisraðir til rekstrareftirlíkinga samþykktar á 24. til 28. fundi REGN

Inngangur

Lýst er þeim rennslisröðum, sem Rennslisgagnanefnd hefur samþykkt til notkunar við rekstrareftirlíkingar virkjana á 24. til og með 28. fundi sínum, þ.e. eftir nóvember 1995 til þessa dags. Einnig er lýst þeim viðbótarröðum í rennslisgrunninum, sem notaðar eru til forathugana, án þess að nefndin hafi tekið þær til efnislegrar umfjöllunar og mats á gæðum þeirra. Nýjum röðum er gefið tilvísunarnúmer í rennslisgrunni. Útprintun af rennslisröðunum er sýnd í viðauka.

Nýjar rennslisraðir

Rennslisröðum samþykktum af Rennslisgagnanefnd (REGN) til og með 23. fundi var lýst í skýrslunni *Rennslisraðir til rekstrareftirlíkinga samþykktar af Rennslisgagnanefnd 1984-94* (Kristinn Einarsson 1995b). Raðir samþykktar frá þeim tíma, til og með 28. fundi, koma fram í meðfylgjandi töflu.

Heimildir um tilurð rennslisraða í töflunni eru svohljóðandi:

24. fundur: Rennslisraðirnar R192, R193 og R198 eru frá Vatnaskilum (1995), unnar með NAM-2 og AQUA líkönum.
25. fundur: Rennslisröðin R141 er frá Orkustofnun, Vatnamælingum. Um er að ræða mælt rennsli í Ölfusá við Selfoss. Í notkun er rennslislykill nr. 2, en hann er í endurskoðun, og verður rennslislykill nr. 3 væntanlega tilbúinn til notkunar um sama leyti og nýjar rennslisraðir frá Þjórsár-Tungnaárvæðinu, sem nú er unnið að hjá Vatnaskilum. Tafla með rennslitölum er því ekki birt að sinni.
26. fundur: Rennslisraðirnar R164, R165, R166, R167, R194, R195, R196 og R197 eru frá Vatnaskilum (1996a), unnar með NAM-2 og AQUA líkönum.
27. fundur: Rennslisröðin R199 er reiknuð út frá eldri röð R116, þannig: Ef reiknað innrennsli skv. R116 er hærra en $20 \text{ m}^3/\text{s}$, er engin breyting gerð, en fari það undir þau mörk er það lækkað um $5/6$ hluta af fráviki þess frá $20 \text{ m}^3/\text{s}$. Þessi bráðabirgðaleiðrétting er upprunnin hjá Landsteinum.
28. fundur: Forathuganir á Skaftárveitu hafa hingað til verið gerðar út frá R136, en sú röð inniheldur líkanrennsli fyrir Köldukvísl. Raðirnar R137 og R138 voru unnar skv. NAM-2 líkani af rennsli Skaftár við Sveinstind hjá Vatnaskilum (1996b, 1996c), og var það gert á vegum Orkustofnunar, þar sem líkansvæðið var skilgreint (Kristinn Einarsson og Skúli Víkingsson 1996). Rétt er að geta þess, að raðirnar innihalda *ekki* hlauprennsli Skaftár, sem á sér uppruna í tveimur hlaupkötlum í Síðujökli.

Utan funda: Rennslisráðirnar R160, R161, R162 og R163 voru gerðar fyrir Landsvirkjun hjá Vatnamælingum Orkustofnunar (Kristinn Einarsson 1996), og var beitt HBV líkani við gerð þeirra, sem til varð í tengslum við athuganir á afleiðingum stórfelldra veðurfarsbreytinga fyrir vatnsbúskap (Kristinn Einarsson 1995a).

Nýtt nr.	Eldra nr.	Lýsing	REGN fundur nr.
R192	-	Samþykkt til rekstrareftirlíkinga Innrennsli í inntakslón Brúarvirkjunar	24

R162	-	Geldingsá við sæluhúsið Grána	-
R163	-	Veituleið til Stafnsvatna	-

Unnið er að meiriháttar endurskoðun rennslislíkans fyrir Þjórsár-Tungnaárvæðið hjá Vatnaskilum á vegum Landsvirkjunar, og má því gera ráð fyrir að frekari greinargerðar verði þörf innan skamms um breytingar á gagnagrunni Rennslisgagnanefndar. Einnig er unnið að endurskoðun líkana við Austari- og Vestari-Jökulsá í Skagafirði hjá Vatnamælingum Orkustofnunar á vegum Auðlindadeildar Orkustofnunar, sem sömu leiðis mun valda breytingum á gagnagrunninum.

Orkustofnun, Vatnamælingar
